

## To capture a bat:

### Rabies

- [Rabies Homepage](#)
- [Bats](#)
- [Coming in contact with bats](#)

A male red bat rests for the day in a maple tree during fall migration south from Canada. Males are more brightly colored than females.

1. Find a small container like a box or a large can, and a piece of cardboard large enough to cover the opening in the container. Punch small air holes in the cardboard.
2. Put on leather work gloves. When the bat lands, approach it slowly and place the container over it. Slide the cardboard under the container to trap the bat inside.
3. If you are certain there s been no contact between the bat and any people or pets, carefully hold the cardboard over the container and take the bat outdoors and release it away from people and pets.
4. If there s any question about contact between the bat and people or pets, you want to save the bat for testing. Tape the cardboard to the container, securing the bat inside and then contact your health department to have the bat tested for rabies.
