For Immediate Release

"May is Lyme Disease Awareness Month"

OTTAWA – In observance of Lyme Disease Awareness month and the warmer weather our area has been experiencing, it's important to take precautions against tick bites and the illnesses they can carry. Illnesses like Rocky Mountain Spotted Fever, Lyme disease, Tularemia, and Ehrlichiosis can cause mild symptoms or severe infections. In LaSalle County, Lyme disease is the tick-related illness seen most commonly. There were 2 cases of Lyme disease confirmed in the county in 2021.

YEAR	NUMBER OF HUMAN CASES
2017	2
2018	4
2019	8
2020	5
2021	2

LaSalle County Health Department is an Illinois Statewide Tick Surveillance Program partner. Because ticks carry a number of diseases that affect people and animals, the data and ticks collected through this program help with surveillance to determine the risk of disease throughout Illinois.

Lyme disease is caused by bacteria called *Borrelia burgdorferi* and is transmitted to humans through the bite of infected blacklegged ticks. The risk of exposure to ticks is greatest in the woods and in the edge area between lawns and woods; however, ticks can also be carried by animals onto lawns and gardens and into houses by pets. Campers, hikers, outdoor workers, and others may be exposed to infected ticks in wooded, brushy, and grassy places. People who spend time in heavily wooded areas where infected ticks are common are at higher risk for exposure.

"Remember to apply an EPA-registered insect repellent when spending time outdoors. Frequent tick checks increase the likelihood of finding a tick before it can transmit disease. Talk to your doctor if you have been bitten by a tick and experience fever, chills, muscle and joint aches, or a rash," says Chris Pozzi, Director of Environmental Health at LaSalle County Health Department.

Simple tips to avoid tick exposure include:

- Wear light-colored clothing to make ticks easier to find. Tuck long pants into socks and boots.

-More-

- Apply an EPA-registered insect repellent containing 20% DEET, picaridin, IR3535, or Oil of Lemon Eucalyptus according to label directions.
- Use products that contain permethrin to treat clothing and gear, such as boots, pants, socks and sleeping tents. Or look for clothing pre-treated with permethrin.
- Walk in the center of trails. Avoid wooded, bushy areas with high grass and leaf litter.
- Conduct full-body tick checks on family members (underarms, ears, belly button, behind knees, between legs, waist, hair and scalp) every two to three hours. Also check any gear or pets taken on outings.
- Put your clothes in the dryer on high for 10 minutes (or one hour for damp clothes) to kill ticks.
- Bathe or shower within two hours after coming indoors.
- If you find a tick on yourself, it is often helpful to keep the tick for species identification. Place the tick in rubbing alcohol or in a sealed bag/container to bring to your healthcare provider or local health department for submission to IDPH. A submission form can be found on the [IDPH website](#).

If you find a tick attached to your skin, there's no need to panic. Remove the tick as soon as possible to reduce your chances of getting an infection from the tick bite. The CDC recommends the following steps to remove a tick:

1. Use fine-tipped tweezers to grasp the tick as close to the skin's surface as possible.
2. Pull upward with steady, even pressure to remove the tick. Avoid twisting or jerking. If the mouthparts remain in the skin, leave them alone. In most cases, they will fall out in a few days.

Don't use nail polish, petroleum jelly, or a hot match to make the tick detach.

3. Clean the bite area and your hands with rubbing alcohol or soap and water.

If you become ill with a fever and/or rash after being in an area where ticks may be, please contact your health care provider. The most common symptoms of tick-related illnesses can include fever, chills, aches, pains, and rash (not in all cases). Early recognition and treatment of the infection decreases the risk of serious complications.

For additional information, please contact the LaSalle County Health Department at 815-433-3366 or visit their website at www.lasallecounty.org. Also, please visit the Illinois Department of Public Health's (IDPH) interactive tick surveillance map created by their Vector Control staff. The map shows what ticks have been identified in Illinois by county, in addition to the diseases they were tested for and number of positive results.
